

THE MILLIT PLANING MACHINE

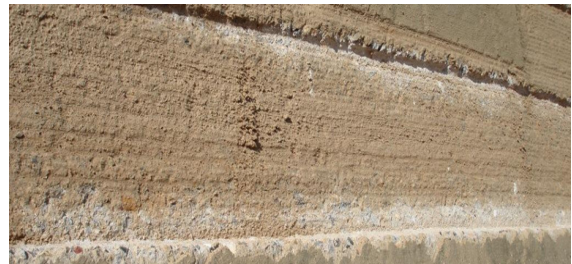

The Millit Cutting-Planing Machine for Reducing Concrete, Screed or Asphalt

The Millit cutting-planing machine has the advantages of a large cutter, but retains its agility and power so reducing concrete, screed, or asphalt in restricted work areas are not compromised.

Its particulate filter omits no carbon monoxide so internal works can be undertaken safely.

Suitable for :-

- Planing-milling defective surfaces
- Cutting-milling of connections
- Repairing / maintaining roads
- Cutting-milling slots, close to edges
- Cutting-milling along markings and thermoplastic
- Cold cutting-milling of concrete surfaces and floors etc.

At the heart of the Millit is a rotating drum with tungsten tips so when lowered the material will be cut -planed to the required depth.

Various picks are available for different usages and surfaces i.e. for fine or aggressive cutting.

Due to the compact design and light weight of the machine, it is easy to manoeuvre and suitable for use on car parks and other areas where loadings might be an issue.

TECHNICAL DATA

Length	1.460 m	Floor Clearance	90 mm
Width	985 mm	Power	46 PS
Height	1.450 m	Strength/Power	34 kw
Motor	Deutz Diesel Motor	Milling Width	60 - 250 - 400 mm
Type	FO3L2011	Cutting Depth	0 - 50 mm (depending on surface)
Cutting Drum	300 mm with chisels	Cutting Drum	200 mm without chisels
Total Weight	1,800 kg	Cooling	Air / Oil
(Without Weights)	1,300 kg)
