

HORIZONTAL BLAST CLEANING MACHINE

HORIZONTAL BLAST CLEANING MACHINE (1-15DS)

Shot blasting is the Professionals' preferred solution:

- To clean and prepare surfaces before applying a coating / paint / resin / tiles
- To remove old coatings, rubbers on airports
- To remove marking on roads, highways, runways, industrial floors...
- To regenerate grip and improve safety on walkways and roads.

How Shotblasting Works:

- The closed blast circuit system throws the abrasive media on to the surface by centrifugal force.
- The media is then recycled within the machine removing the contaminates within the process.
- This system makes the blasting process almost dust free.

Use It For:

- Floor preparation / renovation / maintenance
- Working areas: - large horizontal surfaces
- Warehouses, factories, open areas, car parks, supermarkets, bridges, tunnels

Advantages:

- Closed circuit, dust free when connected to the appropriate dust collector
- Highly versatile machine, appropriate for any size of contract

TECHNICAL DATA

Machine Width 800 mm
Blasting Width 380 mm
Weight 496 kg
20m suction hose, 150mm diameter
Steel abrasive - magnetic broom
Abrasive consumption < 100 gr/m²

Elles House, 4B Invincible Road Industrial Estate, Farnborough, Hampshire, GU14 7QU
